

Jorge Bayuelo

SOC Analyst

jorgebayuelontech@gmail.com | +1(470)647-7959 | <https://github.com/JORGEBAYUELO>

Professional Summary

- CompTIA Security+ certified IT professional with experience supporting enterprise endpoints and troubleshooting complex system issues across Windows environments.
- Experienced analyzing SCCM deployment logs, Windows system events, and diagnostic outputs to investigate system failures and identify root causes of endpoint issues.
- Skilled in Active Directory administration, PowerShell scripting, and enterprise device management using Microsoft Intune and SCCM.
- Strong foundation in security operations, log analysis, threat detection, and incident investigation within enterprise IT environments.

Education

Comfenalco Technological University Foundation
Systems Engineering Technology

Certifications

- CompTIA Security+
- CompTIA A+
- AWS Certified Cloud Practitioner
- Google IT Support Professional Certificate

Technical Skills:

- **Security Operations:** Log Analysis | Security Monitoring Fundamentals | Incident Investigation | Threat Detection Concepts
- **Endpoint & Systems Management:** Microsoft Intune | SCCM (Endpoint Configuration Manager) | Windows Administration | Linux Administration | Device Imaging & Deployment
- **Identity & Access Management:** Active Directory | Microsoft Entra ID | MFA Administration | User & Device Lifecycle Management
- **Automation & Scripting:** PowerShell | Bash
- **Networking & Diagnostics:** TCP/IP | DNS | VPN | Network Troubleshooting | Ping | IPConfig | NSLookup | DSRGCmd
- **Security & Encryption:** BitLocker Encryption | Endpoint Security Controls | Security+ Security Framework

Professional Experience

Dallas County

Feb 2026 – Present

Desktop Support Technician

- Investigated Windows upgrade rollback failures by analyzing SCCM deployment and client logs, executing PowerShell remediation scripts to restore endpoint readiness for successful Windows 11 deployments.
- Managed enterprise endpoints through Microsoft SCCM and Intune, ensuring proper configuration, compliance, and operating system deployment across organizational devices.
- Maintained Active Directory device integrity during endpoint reimaging operations by verifying organizational units and removing stale computer objects to prevent directory conflicts.
- Diagnosed endpoint connectivity and domain join issues using tools including ping, ipconfig, nslookup, and dsregcmd, while supporting BitLocker encryption policies to maintain secure device configurations.

ITTIQ

Sep 2023 – Jan 2026

IT Support & End User Support Engineer

- Resolved complex endpoint and system issues for enterprise users across Windows, and Linux environments by diagnosing hardware, software, and network problems to restore user productivity.
- Strengthened identity and access management controls by administering user accounts, permissions, and security groups in Active Directory and Microsoft 365, ensuring proper access governance.
- Improved endpoint security posture by managing patch deployments and configuration compliance through Intune and SCCM, reducing exposure to system vulnerabilities.
- Increased operational efficiency by developing PowerShell automation scripts for onboarding workflows, mailbox provisioning, and reporting tasks, reducing manual administrative effort.

Synergy Tech Consulting, LLC

Mar 2019 – Jun 2023

IT Support & Infrastructure Specialist

- Maintained reliable infrastructure operations by supporting Linux and Windows servers environments, monitoring performance and resolving system issues to sustain high availability.
- Reduced endpoint deployment time by managing device imaging, hardware provisioning, and system upgrades for enterprise workstations.
- Strengthened network reliability by configuring and troubleshooting DHCP, DNS, firewall rules, and VLAN segmentation to support secure connectivity.
- Improved operational consistency by creating technical documentation and troubleshooting guides for system configurations, backup procedures, and infrastructure support workflows.

Security Labs & Professional Development:

- TryHackMe – SOC Analyst Level 1
- AWS Cloud & DevOps Technologies – KodeKloud
- Jenkins, Docker, Terraform, Shell Scripting - KodeKloud
- Git & GitHub for Version Control - Udemy
